

Stainless Steel Guides

Perfection and Pac Bay have been offering the "offshore standard chrome plated stainless steel guides for decades. Chrome plated finishes have been around the longest but still hold up to the marine environment the best. Titanium Carbide and Nitride have been introduced recently to provide a harder finish for compatibility with the new abrasive lines like spectra. Properly cleaned and cared for chrome plated guides can last a lifetime. Always use Perfection carbide tips for a long lasting, non-grooving set of guides.

Lightweight Casting Guides

Fuji, Pacific Bay

Light weight casting guides are commonly used on saltwater rods in the 12-40 pound range. Built from stainless steel frames with various finishes and ceramic rings, you will get the best corrosion resistance, lightest weight and best line abrasion characteristics from any ring guide design. Some of the latest guides from Fuji "New Concept Guides", offer new ring materials and lighter frame designs for increased performance. Pac Bay also has been busy adding new guide finishes, and ring colors and materials to further enhance the beauty of your custom work.

Lightweight Casting Guides Ring Materials

- ? **Silicon Carbide-** These high quality ceramic insert guides should be used for your better rods and for use with abrasive lines. The best material to prevent heat buildup on your line and the chaffing, which will lead to line breakage. This material is no joke, and is worth the extra money.
- ? **Silicon Nitride-** The newest high quality ring material from Fuji which has been tested to stand up to the extremes of using abrasive lines, but available at a great value
- ? **Hardloy and Hialoy-** These are the most popular guides and are found on most production rods today. These are extremely reliable and have many of the benefits of more expensive guides.
- ? **Alconite-** The newest material from Fuji is "Alconite" which is stronger than Hardloy and also lighter. This new material is currently used with Fuji "New Concept" type guides. Look for BLNAG and BMNAG in the Alconite section.

Fuji Alconite Guides

Lightweight Fuji Alconite provides heavyweight performance. The newest material from Fuji, offers strength, durability and lightness not found in other rings, 80% greater compression strength than Aluminum Oxide. When combined with the Concept guide frame, results are unparalleled.

35% lighter than ordinary guides, up to 50% lighter than ordinary tops! We have been using these popular guides for all our bass and inshore rods with positive results!

Pacific Bay Lightweight Casting Guides

Pacific Bay guides will continue to remain a serious consideration when building our best rods. The light weight casting guides are available in Silicon Carbide, Hialoy, TiOX Blue, TiN Gold and TiCH rings. If you want to do something a little different with your next rod, try one of the new great looking guide frame finishes and ring colors, which are sure to spark things up making your rods more custom that ever.

Guide Spacing Guide

Typical guide spacing used as a starting point is 3.75, 4.00, 4.25, 4.50, 5.00, 5.50, 6.00, 6.50, 7.50 inches measured center to center. Adjust your spacing as needed to prevent fishing line touching the blank at any point on the blank, when the blank is loaded to maximum rated bending. Also check to see that you have at least 24 to 28 inches between the reel location and the first guide.

Verification of guide spacing can be done by:

- ? *Mounting a reel in your reelseat*
- ? *Securing your guides temporarily to the blank with tape and tying off the fishing line to a secure point like a door knob*
- ? *Load a bend in the rod comparable to fighting a fish for that rods rating and inspect line between the guides for touching*

*FYI, the above spacing works just fine 90% of the time.
L.P.*

Heavy Duty Boat Rod and Tuna Rod Guides

Heavy Tuna Rod guides or "Heavy Boat Rod Guides" are available in several different designs from Fuji and Pac Bay. You will find the different guide frame styles arranged in the tables below. Compare each style in the different brands, materials, finishes and prices. A typical guide set for a tuna rod consists of the following sizes:

? 5 ½ - 6 foot- 25, 20, 16, 12, 10, 08, 08, tip

? 6 ½ foot- 25, 20, 16, 12, 10, 10, 08, 08, tip

In some cases when you want to design a rod for passing top-shots and heavy leaders, size 10 may be the smallest guide that you would want, especially for the heavier rods.

Fuji Heavy Duty Casting and Boat Rod Guides

Fuji guides are available in 3 different stainless steel frame designs. The frame you chose is based primarily on your particular preference. Gunsmoke, black, chrome and gold are available.

Silicon Carbide- To be used on your top of the line rods. This material is the hardest and smoothest available and will put the least wear on your line. This is the best material to use if you intend on using any type of abrasive material line.

Hardloy- This material is widely used in quality production rods. This material is considered standard quality and is commonly used for use with monofilament line.

Pacific Bay Heavy Duty Boat Rod Guides

Pacific Bay offers a full line of heavy duty guides with Silicon Carbide, Hialoy and Titanium Oxide rings. The following guide designs are available:

The Best Value in Heavy Duty Silicon Carbide Guides Today!

Silicon Carbide Model RB Heavy Duty Boat Rod Guide

The classic "Turbo" guide together with the hardest ring material in guides. Silicon Carbide is highly recommended for any heavy duty rod using Spectra. Silicon Carbide is best for preventing chaffing and heat build-up on Mono fishing line which eventually leads to your line lasting longer and less fish lost.

AFTCO Roller Guides

AFTCO roller Guides are the industry standard and are shown in the tables below. There are 4 basic models of roller guides; **Big Foot** Super Heavy Duty Roller Guides are best used for rods of line ratings over 130 pound test. They are available with ball bearing rollers as well as standard bushings. **Wind-On** Roller Guides are typically used for your 100 to 130 pound class rods and feature a design to accommodate knots running through the guides, which is typical in tying special leaders or top-shots. Both the Wind-On and Bigfoot guides should be considered when building rods for use in fighting chairs or for "Rail Rods" or for rods used in other than Stand-Up style fishing. The **Standard Heavy Duty** roller Guides are what is used on over 90% of Stand-Up heavy rods using roller guides. These guides are widely used for your 50 to 100 pound class rods or for all stand-up applications. **Regular** Roller Guides are used in lighter applications where the intended line weight is under 50 lb test. All guides frames are brass; plated in chrome, titanium nitride gold, black and gold, and black chrome oxide plating. Use AFTCO roller guides with confidence when using Spectra type lines. It is widely accepted that roller guides do not reduce your casting distance.

AFTCO Heavy Duty Roller Guides These are the standard heavy duty guide used on a majority of heavy Stand-Up rods. Used for use up to 100 lb test

"L" designates roller large head for larger knot clearance if required.

Heavy Roller Guides

Used in applications where mechanical advantage is used to apply higher line and rod loads, such as Fighting Chair Rods and Rail Rods.

AFTCO "Big Foot" Super Heavy Duty Roller Guides For use with bigger rods designed for 130 lb test and up. Ideal for rods designed for fighting chairs and other mechanical means of advantage.

AFTCO Lightweight Graphite/Titanium Roller Guides

AFTCO produces these high performance guides for all your precision saltwater and freshwater rods for 2 to 30 lb test lines. They are lighter than ring type guides, yet are twice as tough. The one piece, one-foot frames are made of a graphite composite material. The guards and rollers are made of pure titanium, which make this guide completely corrosion proof. These guides have been tested and have proven themselves to cast just as well as ring guides while providing the ultimate line protection available from any guide design. These are a great guide for your "Inshore" and Bass rods as well as for high precision offshore fighting rods.

Typical guide set: L6, L5, L4, L4, L3, L3, L2.5, L2. Guide sets can vary depending on your blanks taper. Slight altering of the guide feet for blank fit is acceptable.

All American Roller Guides

The new manufacturer of roller guides with quality fine enough to be considered for your finest heavy rods. The workmanship can be compared with the finest guides on the market. With the frame material being stainless steel, these are the strongest on the market. All of the frame color choices give us rodbuilders more design possibilities. The tips are built from a solid piece of stainless which give these guides even more advantages. Use these guides for all stand-up heavy rod applications when you use 50 pound line or higher
